

## Technical Data Sheet

Special softener for garments containing PVC which has hardened during the dry cleaning process.

- Ideal for inserts, reflective stripes, etc.
- Restores the original elasticity and softness to treated areas
- Used with recommended dosage there is no greasiness
- Ideal and super effective on PVC

Plastisoft

## Technical Data Sheet

### Method of use:

- Apply Plastisoft either with a brush or by spraying onto the areas to be treated until the area becomes slightly greasy.  
Wait 15 – 30 minutes and remove any possible excess of the product with a brush or cloth.
- Dilute the product in proportion with Perc: (plastisoft:percloro) 1:7 – 1:10. Paint the mixture onto the PVC area or, whether the garment is entirely in PVC, soak into the bath. Then leave the wet part dry.

Should there be any undesired staining of the surrounding fabric it can be removed by washing the garment as normal and then reapplying Plastisoft to the areas in PVC.
